1. INTRODUCTION

This report documents the design, implementation, and results of the Maricopa Regional Household Travel Survey, conducted by NuStats from February through December 2001. The study was conducted under the auspices of the Maricopa Association of Governments (MAG).

The purpose of a household travel survey is to obtain information related to travel behavior. This includes information on average vehicle occupancy, trip generation, trip distribution, and modal choice. This study is an essential element in the transportation planning and modeling efforts for Phoenix and the Maricopa County region. The study objective was to produce data that could be used to develop and calibrate travel demand models for use in travel forecasting and air quality planning. The resultant data set will fulfill MAG's future needs to update the existing model and will serve as the foundation for an entirely new generation of travel demand models.

1.1 Background

The Maricopa Regional Household Travel Survey includes data from 4,018 households in Maricopa County and a small portion of Pinal County, which contains the city of Apache Junction. The cities in this geographic area are depicted in Figure 1-1. The geographic distribution of surveyed households is shown in Table 1-1 and graphically displayed in Figure 1-2.

Like all recent household travel surveys, the Maricopa Regional Household Travel Study relied on the willingness of area residents to complete diary records of all travel for a 48-hour period. It was based on telephone interviews of randomly selected households from the study area. Household recruitment for the study was conducted through the use of a "recruitment interview", in which respondents were informed of the survey, its purpose, and the obligation of all household members to complete the survey. Data on the household and household members were also collected during the recruitment interview. Participating households were assigned a specific "travel period" or 48-hour period on which to record their travel and activities. This travel day typically took place 7 to 10 days after the recruitment interview. Collection of the travel information was done through the use of a "retrieval interview."

1.2 Survey Purpose and Coverage

Household travel surveys are used to obtain information about work and non-work travel behavior. This includes trip generation, trip distribution, modal choice, and vehicle occupancy. Updated household travel information can be used for modeling purposes, as well as transportation planning projects and air quality planning efforts. Prior to the 2000 Maricopa Regional Household Travel Study, the most recent household travel survey for this region was conducted in 1988/1989.

A total of 5,478 households were recruited to participate in the study. Of these, 4,018 households (73%) completed travel diaries (travel information was gathered from all household members regardless of age). The 4,018 households represent 10,030 persons, 6,589 vehicles, and 78,511 places visited during the 48-hour travel period.

1.3 Contents of the Report

The purpose of this report is to document the methods used to conduct the Maricopa Regional Household Travel Survey, as well as to present survey results. It is organized into chapters by major topics. In addition to this introduction, the chapters include:

- Survey Methods,
- Weighting and Expansion,
- Survey Results,
- Evaluation of Survey Results.

The **Survey Methods** chapter presents the methods used to conduct the survey. Essentially, the six main phases of data collection are presented and evaluated, along with the quality control guidelines established for use in the study. The phases include sample design, advance notification, recruitment, travel data retrieval, data processing, and geocoding.

The **Weighting and Expansion** chapter documents the process used to weight and expand the data. The **Survey Results** chapter presents the weighted demographic and travel data collected during the course of the Maricopa Regional Household Travel Survey. The fifth section of the report contains an **Evaluation of the Survey Results** from a modeling perspective.

2. SURVEY METHODS

The purpose of this chapter is to summarize the methods used to conduct the Maricopa Regional Household Travel Survey. This survey was a multi-stage study, as it involved up to two telephone interviews and one mailing to the households. Prior to the start of data collection, a pilot test was conducted. The pilot test objectives were to refine the survey materials and to fine-tune the processes and programs that were used to carry out the travel behavior study.

During the months of November and December 2000, NuStats conducted a pilot test of procedures and instruments designed for use as part of the Maricopa Regional Household Activity Survey. The objectives of the pilot test were (1) to conduct a “dress rehearsal” of all procedures and instruments designed for use in the full study and (2) to debrief respondents about their participation experience and reactions to materials. Specific areas of assessment included:

- Examination of all stages of data flow procedures and the quality assurance process.
- Evaluation of respondent reaction to the survey process and exploration of local levels of respondent cooperation and response rates.
- Assessment of project staff training and performance.

Throughout all pilot activities, the goal was to target areas for improvement prior to the start of the full study. The role of the pretest was a critical one in the, it was a test of all systems to ensure everything was in place and ready for full-study implementation. As such, the pretest households did not count toward the required completed households for the actual survey.

The pilot test consisted of all activities required to produce a data set containing travel behavior for all members of the surveyed households. This included sample generation, recruitment, placement of respondent materials, reminder calls, retrieval, geocoding, quality assurance, and data delivery. The pilot focused on two specific zip codes: 85009 and 85210. The 85009 zipcode was selected as it represented an area with a high concentration of zero-vehicle households. The 85210 zipcode represented a median-income area. The sample generation for these two zip code areas resulted in the recruitment of 39 households to participate in the study and the collection of travel data from all members of 21 households.

The second phase of the Pilot Test focused on the respondent reaction to the study. NuStats conducted two mini-focus groups with respondents who participated in the survey, completed their travel logs, and went through the retrieval phase. The purpose of the groups was to gain insight on how to improve or further refine the study. A total of six people participated in the groups, three in each. The discussion guide followed a logical line of open-ended questioning that would elicit useful responses from the group participants. The focus groups allowed NuStats to test all study materials – travel logs, reminder sheets, letters and brochures.

Complete documentation of the pilot test results are summarized in the Pilot Test Report. The data collection procedures used in the full study reflected changes based on the pilot test findings.

The survey processes used in the full study included: (1) sample design and performance, (2) advance notification, (3) recruitment and respondent packet mailing, (4) reminder calls and retrieval, (5) data processing, (6) geocoding, and (7) quality control. The purpose of this chapter is to describe each stage as well as to evaluate how well each particular procedure worked.

2.1 Sample Design and Performance

The sample for the Maricopa Regional Household Travel Survey was intended to optimize the production of data with sufficient observations for all relevant levels in four stratification variables: household vehicles, household size, household workers, and geographic distribution (census designated places). As such, the sample design for the survey was designed to guide the collection of data such that the resultant data set would include adequate representation of households by geography as well as mirror key demographic characteristics. The data collection goals by census-designated place are shown in Table 2-1.

The survey employed a probability sample selection process to select households for inclusion in the study. The major requirement for probability samples is that the relative probability (or chance) of any given household in the universe being included in the sample is known. Once the sampling procedure was determined, the selection of specific households for inclusion in the sample was left entirely to chance.

The type of probability sampling employed was stratified sampling in which the sample elements were drawn proportionately to the households within each of the 573 census tracts comprising the study area. This distribution is shown in the “Proportionate Sample” column of Table 2-1.

Once the proportionate sample distribution was calculated, an estimate of the number of 0-vehicle households was determined and found to be insufficient, given the over-sample goals desired for model development. Adjustments were made as shown in the “Disproportionate Sample” column of Table 2-1, to balance proportionate geographic coverage vs. the need for 0-vehicle households.

Once the sampling distribution was finalized, the sample was randomly generated across all telephone exchanges within each census tract. Thus, the sample design for each tract was a strict probability sample for that area. The sampling frame included both listed and unlisted telephone numbers, where “listed” numbers were those for which a household address could be identified.

The definition of a completed household was one in which travel and activity data were collected from all household members (regardless of age). A total of 4,108 households met this criterion. The distribution of completed households by Census Designated Place is shown in Table 2-2.

**Table 2-1
Sample Goals by Census Designated Place**

Place Name	Proportionate Sample	Disproportionate Sample	Retrieval Goal
Apache Junction	0.1%	0.1%	70

Salt River Res.	10	5	50.0%
Fort McDowell Res.	1	1	100.0%
Balance of County	146	168	115.1%
	4000	4018	100.5%

It should be noted that households in the communities of Carefree, Paradise Valley, and Queen Creek are included in the recruitment. However, no samples were retrieved from these cities.

- a. **Household Response Rates.** In addition to having sufficient sample sizes for modeling, it is also important to understand the level of effort required to attract, retain and obtain travel data from households in the study area. The response rate calculation is the best measure of this level of effort, as it indicates how many households had to be recruited in order to obtain a completed household.

The response rate is the ratio between completed interviews and total eligible sample called on the telephone. The response rate is calculated for recruitment, then retrieval. The overall response rate is determined by multiplying the two resultant rates. The recruitment rate for this study was 42%, the retrieval rate 73% and the overall response rate for the study was 31% (42% * 73%). In other words, 31% of all eligible households that were contacted actually completed the survey. This is comparable to those achieved in similar studies conducted across the US in recent years (see table 2-3). It should be noted that the events of September 11, 2001 that occurred during the course of data collection for this study and had little impact on the response rate.

Table 2-3
Comparison of Household Response Rates
Among Other Metropolitan Areas

Survey	Type	Rate
2000 Maricopa Regional Study	2-day	31%
2000 Philadelphia/South Jersey	1-day	33%
1997/98 Metropolitan NY/NJ/CT	1-day	34%
1999 Seattle	2-day	32%

- b. **Identification of Non-Response Bias.** As with any survey, the issue of non-response bias is important and must be addressed. Non-response bias in a survey data set occurs when certain individuals from the study universe do not participate in the survey. In order to determine if non-response bias is an issue in the Maricopa Regional Household Travel Survey, the survey data was compared to 1995 census data. This comparison determined if specific sub-groups of the population were not included in the data set. This comparison is shown in Tables 2-4 through 2-7. As shown in those tables, the demographics of the households participating in the study tracked the 1995 Census fairly well.

Household Vehicles: Due to a focus on zero vehicle households during data collection, the final data set contains 4% more zero vehicle households than were present during the 1995 Census.

Household Size: The focus on zero vehicle households resulted in a slight over-sample of 1-person households (7% above 1995 Census data). However, the remaining household sizes tracked the Census data fairly well. Data collection efforts that focused on the larger households paid off, as there was no significant difference between the Census data for households with 4 or more persons.

Household Income: The household income distributions (unadjusted for inflation) indicate a slight over-sample of higher income households. However, this is not a significant difference, suggesting that the distribution of survey households by income is fairly consistent with that of the 1995 Census households.

Age: The age of the respondents tracks that of the 1995 Census fairly accurately.

Table 2-4
Comparison of Survey and Census Household Distributions by Vehicle Availability

Household Vehicles	Survey Households	1995 Census Data	Percent Difference
0	10.5%	6.5%	+4.0%
1	40.9%	38.4%	+2.5%
2	36.7%	40.6%	-3.9%
3+	11.9%	14.5%	-2.6%
Total	100%	100%	

Table 2-5
Comparison of Survey and Census Household Distributions by Household Size

Household Size	Survey Households	1995 Census Data	Percent Difference
1	29.8%	22.9%	+6.9%
2	34.2%	35.9%	-1.7%
3	12.9%	16.2%	-3.3%
4+	23.0%	25.0%	-2.0%
Total	100%	100%	

Table 2-6
Comparison of Survey and Census Household Distributions by Household Income

Household Income	Survey Households	1995 Census Data	Percent Difference
< \$10,000	7.2%	9.6%	-2.4%
\$10,000 to < \$20,000	15.2%	16.6%	-1.4%
\$20,000 to < \$35,000	22.0%	-	-
\$35,000 to < \$50,000	20.2%	-	-
\$50,000 to < \$70,000	16.0%	-	-
\$70,000 +	19.4%	-	-
Total	100%		

Note: 1995 Census categories were inconsistent with the survey categories above \$20,000. A total of 73.8% of census households reported incomes above \$20,000 as compared to 77.6% of survey households, or a difference of 3.8%.

Table 2-7
Comparison of Survey and Census Person Distributions by Age

Age	Survey HH Members	1995 Census Data	Percent Difference
< 22	31.4%	32.1%	-0.7%
22 – 59	49.9%	51.7%	-1.8%
60 – 64	4.4%	3.5%	+0.9%
65 – 74	7.4%	7.0%	+0.4%
75 +	6.9%	5.6%	+1.3%
Total	100%	100%	

Table 2-8 provides a broader look into the non-response issue by viewing additional household demographic distributions as compared to 1995 Census data. As indicated in Tables 2-4 through 2-8, the survey data is a good representation of the Maricopa County region in terms of residence type, home ownership, households with telephone service interruptions, household size, household vehicles, household workers, household ethnicity and respondent age. Residence type showed the greatest variance from the census data, as the survey included more respondents in single- family homes vs. those that lived in other types of homes.

Table 2-8
Comparison of Survey and Census Household Distributions

Variables	Survey Data %	Census Data %	Difference %
Residence Type			
Single family	62.4%	54.0%	+8.4%
All other types	37.6%	46.0%	-8.4%
Home Ownership			
Own	68.5%	65.0%	+3.5%
Rent	31.1%	35.0%	-3.9%
Other	0.4%	-	+0.4%
Episodic Phone Service			
Yes	1.5%	4.6%	-3.1%
No	98.5%	95.4%	+3.1%
Household Workers			
0	26.4%	31.4%	-4.9%
1	39.0%	32.8%	+6.2%
2	28.9%	30.0%	-1.1%
3+	5.7%	5.4%	+0.3%
Household Ethnicity			
Hispanic	18.5%	20.5%	-2.0%
White	72.6%	71.9%	+0.7%
Black/African American	3.5%	3.5%	-
American Indian	1.7%	1.5%	+0.2%
Asian/Pacific Islander	1.1%	1.9%	-0.8%
Other	2.6%	0.7%	+1.9%

2.2 Advance Notification

All households for whom addresses were available at the time of sampling (i.e., the address was listed in the sampling frame) were mailed an advance letter and brochure. The advance letter served to introduce the household to the Maricopa Regional Household Travel Survey. It was personalized to the household and printed on MAG letterhead. The purpose of the brochure was to provide detailed information about the survey, to explain what participation would entail and to provide answers to commonly asked questions. The project website was also referenced, if additional information was required.

A total of 9,980 advance notification packets were mailed to sampled households for whom a name and address were available in the sampling frame. For those households where only a telephone number was available (i.e., unlisted telephone number), there was no advance notification.

2.3 Recruitment and Respondent Packet Mailing

Approximately five to seven days after the advance letters were mailed, the first recruitment attempts were made. The purpose of the recruitment interview was to secure participation from the household and to collect baseline demographics for the household and its members, vehicle information and work or school addresses. The interview was conducted using computer-aided telephone interviewing (CATI) technology. The day following recruitment, personalized diaries were prepared for each household and mailed.

The recruitment calls began in March 2001 and continued through May 2001, then began again in July 2001 and continued until November 2001, allowing for breaks during the summer months and Thanksgiving holiday. Over the course of the recruitment effort, 81,252 telephone numbers were called. Of these:

- 13,103 (16%) resulted in contact with eligible households.

- 34,726 (43%) were determined to be ineligible (non-working, non-household or non-voice lines, and

- 33,423 (41%) were unable to be classified as eligible or ineligible after 8 call attempts

Of the eligible households reached, 5,478 of the 13,103 agreed to participate in the study (42%). The average length of the recruitment call was 17.1 minutes.

It is important to note that the amount of sample used in this study was higher than normal, given the over-sampling of zero vehicle households desired by MAG.

The recruitment instrument performed well. Marginal item non-response (less than 5%) was noted for most variables, while the income-related questions had the highest non-response. Item non-response by question is as follows:

a. Household Questions – Of the 19 household level questions asked, item non-response was present for 12 of them as noted below:

- Household income – 9.9%

- Income sources (asked if income < \$25k or income refused) – 6.7%

- Email account – 6.3%

- Internet access type – 5.9%

- Length of time no phone service – 3.1%

- Lack of phone service – 1.3%

Household ethnicity – 1.2%
Tenure at current home – 0.9%
Own/rent status – 0.1%
Dwelling type – 0.1%
Computer ownership – 0.1%
Internet service – 0.1%

b. Person Questions – Of the 30 person level questions asked, all had some level of item non-response, as noted below:

Cost to park at work – 27.4% (asked of all workers, regardless of reported mode to work)
Cost to park at school – 24.3% (asked of all students, regardless of reported mode to school)
Knowledge of employer subsidies for transit – 17.2% (asked of all workers, regardless of reported mode to work)
Hours worked on secondary job – 11.2%
Mode to work – 11.0%
Employer name – 9.7%
Work end time – 8.2%
Tenure at current work location – 7.9%
Hours worked at main job – 7.2%
Knowledge of employer subsidies for parking – 7.0% (asked of all workers, regardless of reported mode to work)
Work start time – 6.5%
Type of disability – 6.0%
Age – 4.0%
Occupation – 3.8%
Gender – 3.7%
Use internet – 2.8%
Mode to school – 2.8%
Education achieved – 2.5%
Work schedule – 2.3%
Number of days attend school – 2.1%
School location – 1.9%
Work location – 1.9%
Number of jobs held – 1.5%
Internet usage purposes – 1.2%
Work status – 0.5%
Disabled – 0.4%
Disabled license plate – 0.4%
Relationship to respondent – 0.4%
Student status – 0.3%
Driver's license status – 0.3%

c. Vehicle Questions – Of the 5 vehicle questions asked, all had a marginal level of item non-response, as noted below:

Vehicle year – 1.9%
Vehicle make – 1.9%
Vehicle model – 6.0%
Vehicle body type – 0.4%
Vehicle ownership – 0.5%

2.4 Reminder Calls and Retrieval

The reminder calls were made to all recruited households the night prior to their assigned travel period. The purpose of the reminder call was to confirm that each household had received its packet and to answer any last minute questions the household might have. Data retrieval began the day following the second travel day or on the appointed day and time (as requested by the respondent).

The retrieval calls began in March 2001 and continued through May 2001, then began again in August 2001 and continued until early December 2001, allowing for breaks during the summer months and Thanksgiving holiday. Over the course of the retrieval effort, all 5,478 recruited households were called. Of these, 4,018 (73%) resulted in completed household interviews. The average length of the retrieval call was 25.4 minutes.

The retrieval instrument itself performed well. Marginal item non-response was noted for 13 of the 21 variables. Item non-response by question is as follows:

- Bus fare payment info – 21.5%
- Time got off bus – 17.1%
- Time arrive at bus stop – 14.1%
- Wake time on Day 2 – 3.2%
- Wake time on Day 1 – 2.9%
- Land use type – 1.7%
- Highway usage – 1.7%
- Egress mode – 1.7%
- Access mode – 0.8%
- # traveling together – 0.6%
- # non-household members traveling with respondent – 0.6%
- Which household vehicle used – 0.2%
- Was a household vehicle used? – 0.1%

2.5 Distribution of Travel Days

As households were recruited, they were asked to keep track of their travel for a specific 48-hour period of time. The goal was to have an equal distribution of households across the weekday travel day pairs and about 10% each for those pairs involving Saturday or Sunday.

Table 2-9
Distribution of Households by Day of Week

Travel Day Pair	Frequency	Percent
Sunday/Monday	422	10.5%
Monday/Tuesday	954	23.7%
Tuesday/Wednesday	788	19.6%
Wednesday/Thursday	725	18.1%
Thursday/Friday	720	17.9%
Friday/Saturday	409	10.2%

Base: All households, weighted.

2.6 Data Processing

The data collected through the recruitment and retrieval interviews were processed daily using NuStats' Continuous Data Flow (CDF) system. The CDF system served as the pipeline to channel data from one stage to the next in a continuous fashion. This system prevents data progression if the stage progression criterion is not met, without impeding the overall flow of data. The CDF system used in this project had 14 stages.

The following table documents the continuous data flow stages from sample generation to timely data delivery. The progression criteria are stated in the third column. Two types of reports were used to monitor progress: production reports showed movement of the data (how many interviews were completed the previous night, geocoding progress, etc.); exception reports showed lack of movement (the number of recruited households that could not be geocoded and therefore were not mailed a packet). Tracking both progression and exceptions was critical to successful completion of the project.

Table 2-10
NuStats' Continuous Data Flow Progression

Stage	Stage Description	Progression Criteria
1	Sample Generation	None
2	Geocode Home Addresses	Geocoded addresses go to Stage 3 Ungeocoded listed and unlisted addresses go to Stage 4
3	Advance Mailing – Introductory letter with study brochure are mailed to sampled households electing this option	All sample progresses to Stage 4.
4	Recruitment Interview – Sampled households are contacted to secure participation in the study. Those who agree to participate provide demographic data and are assigned travel days	If the interview is completed, goes to Stage 5 If the interview is not completed, exception report is generated If interview is not attempted, sample status is updated and sample is scheduled for callback according to sample management rules
5	Geocode Habitual Addresses – work and school addresses are geocoded	If address geocodes, goes to Stage 6 If address does not geocode, exception

		report generated and also proceeds to Stage 6 but flagged with address information need
6	Diary Placement – A personalized diary packet is prepared and mailed to each recruited household	If packet is mailed, goes to Stage 7 If packet is not mailed, exception report generated to indicate reason
7	Reminder Call – Recruited households are contacted to confirm receipt of diary packet and remind about upcoming travel days	If household is ready, goes to Stage 10 If household needs new packet, goes to Stage 6 If household is rescheduled, can go to Stage 6 or 10 If household refuses, exception report is generated and assigned to interviewer specializing in refusals
8/9	Travel Days – Household members record travel on assigned days	
10	Retrieval Interview – The first retrieval call is placed the day following travel or at a respondent-designated time	If household provides data according to definition of “complete”, goes to Stage 11 If household provides partial data, exception report is generated and household does not progress If household did not record travel data and is rescheduled, can go to Stage 7 or 9 If household refuses, exception report is generated and assigned to interviewer specializing in refusals
11	Field Edits – the night the retrieval interview is completed, work is checked for completeness	If work meets standards, goes to Stage 12 If work does not meet standards, exception report is generated and household is assigned for callback / correction
12	Data Processing – at the conclusion of each data collection shift, all data are processed and prepared for edit check and geocoding	If processed data meets completeness standards, goes to Stage 13 If processed data does not meet completeness standards, exception report is generated and household is assigned for correction / callback
13	Geocoding of Trip Ends – all new address information (new or updates to previously collected information) is geocoded through both batch and interactive processes	If geocoded, goes to Stage 14 If not geocoded, exception report is generated and household assigned for correction/callback Daily reports monitoring hit rates
14	Data Quality Checks – all data is subjected to visual inspection and edit check program to ensure quality standards and data specifications are met	If passes, goes to Stage 15 If fails, exception report is generated and household assigned for correction/callback Daily reports monitoring pass rates
	Process complete – data ready for delivery	If process complete, data flagged for delivery and process ends If process not complete and time thresholds crossed, exception report is produced and data specialist addresses household to ensure data movement

2.7 Geocoding

The term “geocoding” defines the process of evaluating address information with the goal of assigning an exact latitude and longitude. This process took place throughout the course of the project, beginning with the home addresses, continuing with habitual addresses (work and school locations), and also including the trip ends (non-home and non-habitual locations) collected during the retrieval stage of the project.

Using ArcView software, all home, work, school and trip locations reported were subjected to the geocoding task, using coverage files provided by MAG. At the conclusion of the project, 25,427 addresses comprised the “location” file for the 4,018 households that completed the study. Of these, 94% were successfully matched to latitude/longitude coordinates. The distribution of addresses by type and geocoding status is shown in Table 2-11.

Table 2-11
Address Geocoding Outcomes

Address Type	Matched	Unmatched	% Matched	Out of Area
Home	4,018	0	100%	0
Habitual (work & school)	6,159	838	88%	62
Other Locations	15,250	795	95%	605
Total	25,427	1,633	94%	667

2.8 Quality Assurance

The data that summarizes the demographic and travel behavior characteristics of the 4,018 households was subjected to both manual and electronic quality checks. These checks reviewed the data for conformity to variable requirements, logical consistency and quality standards. The checks included:

a. Across all files

Range of values for each data item is valid, including values for non-response (i.e., responses cannot be outside range)

b. Household file

Compare the size of each household in household file with number of person records for the same household, in the person file.

Compare the number of vehicles recorded in the household file with number of vehicle records in vehicle file for each household.

Sum the number of places and trips in trip file for each household, by each travel day as well as for the 48-hour travel period.

c. Person file

Verify that the number of places recorded for each person is at least as many as the number of places the respondent indicated visiting at the start of the retrieval interview.

Verify that if employed, respondent went to work on travel day or provided reason for being absent.

Verify that if a student, respondent went to school on travel day or provided reason for being absent.

d. Vehicle file

Verify vehicle year if older than 1960.

Re-contact household if vehicle make and model were not reported.

e. Trip file

Verify that each household member has at least one place record.

Verify that household and person records exist for each sample number in the trip file.

Verify that travel times are consistent and logical: (1) arrival at place N is prior to departure from place N; (2) arrival at place N+1 is after departure from place N.

Re-contact household if extreme trip durations and/or activity durations.

Verify that all household members returned home at the end of the travel day or that the last reported location was plausible.

Verify that travel data exists for all places except Place 1.

Verify that reported activities are consistent with the reported locations.

Any discrepancies were flagged for research, corrections and/or verification.

3. WEIGHTING AND EXPANSION

The Maricopa Regional Household Travel resulted in the creation of a data set that contains the demographic and travel behavior characteristics of 4,018 households in the Maricopa County region of Arizona. The 4,018 Maricopa households had 10,030 members, 6,586 vehicles, and visited 78,511 places over their 48-hour travel periods. When expanded, the data represents the 957,730 households in the Maricopa County survey universe. The purpose of this chapter is to document the procedures for weighting and expanding the data.

3.1 Weight Calculations

The creation of a household-level weight factor for the Maricopa County households is comprised of four elements that aim to adjust the survey data to correct for differential rates of sampling that occurred and telephone ownership patterns.

a. Probability of Selection – Telephone Lines per Household

The probability of selection calculation assumed that each household in the universe had an equal probability of selection. In other words, it assumed that each household had one phone line, and therefore one chance of selection. This was not the case in the MAG region as 9% of the households indicated they had more than one working voice phone line (see Table 3-1). By determining the number of lines represented (# phone lines multiplied by # households with that many lines), the 4,018 Maricopa households reported having 4,440 telephone (voice) lines available.

The weighting factor to account for multiple phone numbers per household was created through a two-step process. First the actual number of voice lines available to each household was determined by subtracting the number of dedicated fax lines from the total phone lines available to the household. Then, FACTOR1 was created to adjust the data to compensate for cases where more than one phone line was available. Given the fact that not all households had only one line, those with one line were actually sampled at less than one chance of selection. These households (with only one line) therefore needed a factor of slightly more than one to reflect the disparity.

Table 3-1
Total Number of Phone Lines per Household

# Phone Lines per Household	# Households	# Lines Represented	FACTOR1
1	3,672	3,672	1.1050
2	287	574	0.5
3	47	141	0.33
4	7	28	0.25
5	5	25	0.20
Total	4,018	4,440	

b. Probability of Selection – Geography and Household Vehicle Availability

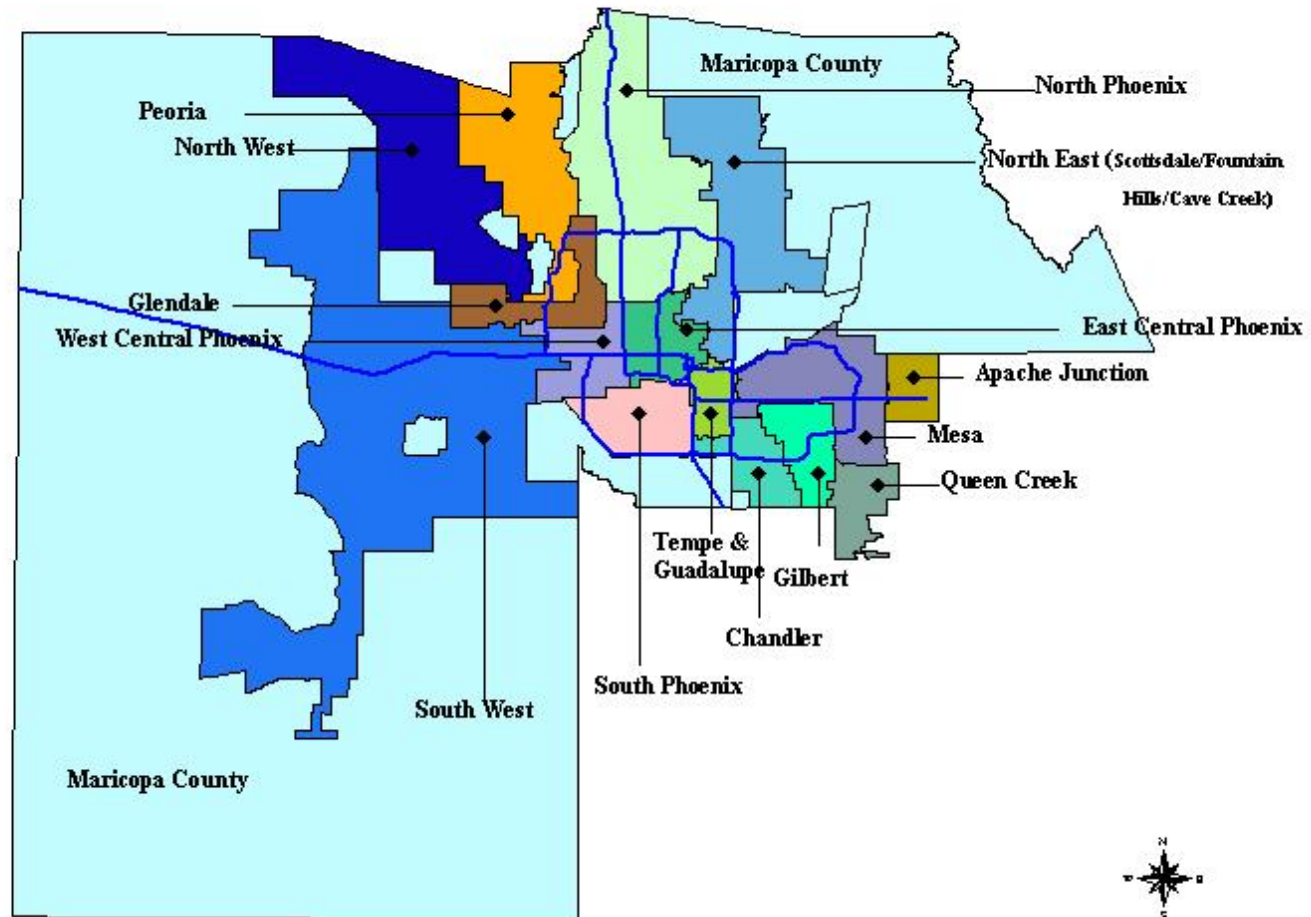

Under ideal sampling conditions, the study area is relatively homogenous with respect to telephone ownership. In those instances, the weight calculations would only need to take into account the sample size (the actual number of telephone numbers drawn and made available for contact) and the estimated universe of households within the study area. The

unique relationship of those two numbers for each county would be the probability of selection, and the inverse of them would be the weight factor that would be applied to each household based on its county of residence.

The Maricopa County region of Arizona does not have this relative homogeneity. Certain locations had very high levels of telephone ownership turnover and very different rates of working telephone numbers, while others were much more stable. The first factor involved in weight calculation incorporated the probability of selection and took into account the number of telephone lines per household. This second factor reflects the heterogeneity of the communities within the study area. The approach combines weighting with geographic balancing and uses the actual number of completed households and the universe of households by census-designated place (see Figure 3-1). MAG staff determined the city groupings used in this weighting process. The city groupings are listed below. The criterion was to allow each group to contain a sufficient number of households so that the resulting statistics were meaningful for analysis. The smallest grouping (Gilbert) contained 41 households.

- Apache Junction
- Chandler
- Gilbert
- Glendale
- Mesa
- Peoria
- Phoenix (4 parts: North, West Central, East Central, and South)
- Tempe & Guadalupe
- Scottsdale, Fountain Hills, and Cave Creek
- Sun City & Sun City West
- Maricopa County (includes Fort McDowell, Gila River Reservation, and Salt River Reservation)
- Southwest (includes Avondale, Buckeye, Gila Bend, Goodyear, Litchfield Park, Tolleson and Sunlakes)
- Northwest (includes El Mirage, Surprise, Wickenburg, and Youngtown)

Figure 3-1
Determination of City Groupings

The following three tables illustrate the factor calculation process for the geographic strata. Table 3-2 contains the proportion of completed household surveys by the number of vehicles each household recorded in all city groupings. Table 3-3 contains the same type of proportions except they are based on the 1995 special census instead of the household survey. Table 3-4 contains the weighting factors, which were derived from the data in the previous two tables. These factors account for the probability of selection.

The following example is provided to explain how the specific weights contained in Table 3-4 were developed. The example is for Apache Junction households with one vehicle.

A total of 31 Apache Junction 1-vehicle households completed the household travel survey or 0.77% of the total households in the MAG sample, as shown in Table 3-2.

According to the 1995 Census Data for Maricopa County, 1.72% of the households in the study area were 1-vehicle households from Apache Junction, as shown in Table 3-3.

With a uniform sample, the percent of totals calculated for the sample and the universe would be the same, setting the probability of selection to 1.0. In the case of Apache Junction, the 1-vehicle survey households represented 0.77% of the total, while they accounted for 1.72% of the universe. To create the factor for 1-vehicle Apache Junction households, the distribution of surveyed households was brought into line with the incidence in that portion of the county. Specifically, 1.72% was divided by 0.77% to create the weight factor of 2.2268.

This process was repeated for all cells in both Tables 3-2 and 3-3.

Since the weights were applied by these groupings, there is no need for a weight factor for the entire study region.

Geographic Area	Household Vehicles				
	0	1	2	3+	Total
Apache Junction	0.00%	0.77%	0.50%	0.10%	1.37%
Chandler	0.20%	1.57%	1.87%	0.45%	4.08%
Gilbert	0.02%	0.12%	0.72%	0.15%	1.02%
Glendale	0.70%	2.79%	2.44%	0.95%	6.87%
Mesa	1.52%	5.15%	4.60%	1.69%	12.97%
Peoria	0.25%	0.97%	1.19%	0.55%	2.96%
North Phoenix	0.25%	3.26%	3.53%	1.27%	8.31%
West Central Phoenix	1.02%	4.80%	3.78%	0.97%	10.58%
East Central Phoenix	4.26%	9.66%	6.30%	2.17%	22.37%
South Phoenix	0.85%	1.89%	1.82%	0.60%	5.15%
Scottsdale/Fountain Hills/Cave Creek	0.45%	2.91%	2.39%	0.70%	6.45%
Sun City/Sun City West	0.10%	1.99%	1.32%	0.37%	3.78%
Tempe/Guadalupe	0.72%	2.39%	2.79%	0.65%	6.55%
Southwest	0.10%	0.60%	0.92%	0.42%	2.04%
Northwest	0.00%	0.65%	0.37%	0.07%	1.10%
Maricopa County	0.07%	1.37%	2.12%	0.85%	4.41%
Total	10.50%	40.89%	36.66%	11.95%	100.00%

Table 3-3
Percent Distribution of 1995 Census Households by Geography

c. Probability of Selection – Households with Episodic Phone Service

To account for non-telephone owning households in a telephone survey, an adjustment is required using data reported by those households reporting episodic telephone ownership as proxies. Episodic phone ownership is defined as telephone service that is turned on or off over a given period of time, largely due to a lack of financial resources (telephone service is disconnected due to non-payment and re-activated when the household is able to pay the outstanding bill). Households with episodic telephone service differ from households without telephones (i.e., households that have not had any telephone service established). They are also different from households who have been without service for a period of less than two weeks, as those service interruptions are typically associated with weather or equipment issues.

As shown in Table 3-5, most households (95%) were non-episodic (i.e., they reported no interruption of telephone service in the past year). An additional 102 households (3%) reported service interruptions of less than 2 weeks. However, 84 households (2%) reported having telephone interruption that lasted 2 weeks or longer in the year prior to the survey. These households are used as proxies to represent the other non-telephone households with episodic service in the region.

Table 3-5
Distribution of Households by Service Interruption Lengths

Length of Service Interruption	Frequency	Percent
No service interruptions (non-episodic)	3,832	95.4%
Less than 2 weeks (non-episodic)	102	2.5%
2 weeks but less than 1 month	24	0.6%
1 month but less than 3 months	23	0.6%
3 months but less than 6 months	17	0.4%
6 months but less than 1 year	20	0.5%
Total	4,018	100%

A weighting factor is required to adjust the data for episodic telephone ownership. This factor was determined comparing the incidence of episodic telephone ownership in the Phoenix region with non-telephone ownership data as reported in the March 2001 Current Population Survey (CPS) conducted jointly by the Bureau of Labor Statistics and the Bureau of the Census. Using the customized data access software provided on the CPS website, it was determined that 4.6% of households in the Phoenix region were non-telephone households (this includes both episodic and hard-core non-telephone ownership categories).

In reality, only about half of the CPS non-telephone households are episodic. This rate is based on a general pattern observed in anecdotal evidence collected through in-person interviews and postcard follow-up surveys conducted with non-telephone households by NuStats on other studies. There have been no papers published that can serve as a resource in this area. Based on NuStats experience, the CPS distribution was adjusted to allow for a direct comparison with the MAG data. Once the adjustment was made, FACTOR3 was a straightforward calculation, as shown in Table 3-6.

Table 3-6
Episodic Telephone Ownership Factor

Is phone service episodic?	MAG Households	MAG Percent	CPS Web Data	Adjusted CPS	FACTOR3
No	3,934	97.9%	95.4%	97.1%	0.9918
Yes	84	2.1%	4.6%	2.3%	1.0952
Total	4,018	100%	100%	100%	

d. Normalization of Weights

If the data weights were based on Factors 1 through 3 as presented in the tables above, the weighted data would represent 4,176 households rather than the 4,018 as actually contained in the data set. To account for this and still maintain the relative place of each household after weighting, all households were given a FACTOR4 value of 0.9622.

Once each household received a value for each of the four factors, the weight was calculated through a straight multiplication of factors 1 through 4. The weight was applied in the analysis of the data results as presented in the remainder of this report. An example of the effect of the weighting on the data is shown in Table 3-7, which shows the unweighted and weighted distributions of responses to the household vehicle question.

Table 3-7
Household Vehicles: Unweighted and Weighted Distributions

Household Vehicles	Unweighted Distribution	Weighted Distribution
0	10.5%	6.4%
1	40.9%	40.3%
2	36.7%	40.0%
3+	11.9%	13.3%
Total	100%	100%

3.2 Expansion Calculations

The 4,018 participating Maricopa households were randomly selected to represent the 957,730 households that comprise the survey universe for Maricopa County. The purpose of this section is to expand the results of the 4,018 households so that they can be used to approximate the 957,730 regional households.

Since the weighting process accounts for probability of selection and representativeness, the creation of an expansion factor for the Maricopa County households is comprised of two elements that aim to expand the survey data from the 4,018 households to the 957,730 regional households that they represent. In essence, the process used to create the weights as detailed above is reversed. First, a general expansion number is created based on the mathematical relationship between the universe and survey households. Then, an expansion factor is derived to maintain proper proportions of the households within the survey data set.

a. Calculation of Expansion Number

There are 957,730 households in the survey universe. Of these, 4,018 were surveyed as part of this project. Therefore, each surveyed household represents 238.35988 universe households. This was determined by dividing the number of universe households by the number of households in the sample. This number becomes FACTOR5 and is attached to each household record.

b. Calculation of Expansion Factor

FACTOR5 is then multiplied by the unique weight created for each household, as detailed in the previous section. The multiplication is necessary to keep the households in relative proportion with each other. The result of this multiplication is the expansion factor, EXPFACT. The results of the expansion factor are shown in the following tables. Specifically, the distribution of households by geography and household vehicle availability is shown in Table 3-8, while the corresponding distribution of universe households compared to the expanded data are shown in Tables 3-9 and 3-10.

Table 3-8 Distribution of Surveyed Households by Geography

4. SURVEY RESULTS

The survey results section is organized to discuss each of the four types of data that were collected. The data types were; household, person, vehicle, and travel. In addition there is a section that shows the result of expanding the travel data to represent all travel in the Maricopa Region.

4.1 Household Survey Results

A total of 4,018 Maricopa County households participated in the Maricopa Regional Household Travel Survey. The household data includes demographic information about the households, such as household size, household vehicles, bicycles owned, dwelling type, home ownership status, tenure, computer ownership, and Internet access. It also includes information necessary for the weighting process (number of telephones per household, number of households per telephone number, episodic telephone ownership), cellular telephone ownership, and summary statistics about the number of places and trips made during the 48-hour travel period.

In a sample of 4,018 households, if 50% answered yes and 50% answered no, the sampling error is estimated at +/- 2.2%. The confidence interval for each response would then, is between 47.8% and 52.2%. We would estimate with 95% confidence that the proportion of the total population who would say yes is somewhere within that interval. The table for estimating the sampling error at 95% confidence interval is shown in Appendix F.

The tables in this section of the report present the weighted results for the 4,018 Maricopa County households and include all household level variables collected during the survey.

a. Household Demographics

The following tables present the demographic characteristics of the Maricopa County households that participated in the study. The household data includes demographic information about the households, such as household size, number of employed household members, household vehicles, bicycles owned, dwelling type, home ownership status, and tenure. It also includes summary statistics about the number of places and trips made during the 48-hour travel period.

Overall, there were 1.64 vehicles per household in the Maricopa County region. Gilbert households had the highest average number of household vehicles (2.01 per household). Sun City/Sun City West, Apache Junction, and East Central Phoenix households had the lowest average vehicles per household.

Base: All households, weighted.

To assist with monitoring and measuring the effect of recent welfare-to-work initiatives in the region, all households that reported an income of less than \$20,000 or refused to provide an income were asked about the sources of their household income. As shown in Table H-8, 2% of this subgroup received welfare benefits in 2001. These households were located in Glendale, Mesa, West Central, East Central, and South Phoenix, and Scottsdale/Fountain Hills. The "Other" sources of income included child support, retirement benefits, parental support, student loans and AHCCCS.

Base: All households reporting incomes less than \$20,000 or that refused to provide income, weighted.

The majority of households live in a single-family detached structure (64%), while 30% reported living in multi-family structures (duplex, apartments, or condo). Five percent of the respondents live in mobile homes. East Central Phoenix respondents were most likely to live in an apartment. Mobile home dwellers were mostly found in Apache Junction.

Total	4018	70.7%	28.8%	0.5%

Base: All households, weighted.

Most Maricopa County residents (44%) have lived at their current address for more than five years, while 30% reported living at their current residence for the past 1-3 years. Fourteen percent of the respondents are new to their home, having moved there within the past year. Those who have lived in their home the least (less than 1 year) were more likely to be found in Gilbert (28%) or Chandler (22%).

Table H-11
Year Moved to Current Residence

Total	4018	13.7%	29.9%	11.2%	44.3%	1.0%

Base: All households, weighted.

Computer ownership is rising across the United States and its affect on the level of telecommuting is yet unknown. For this study, three computer-related questions were asked of each household. First, does that household own a computer? If so, does that household have Internet service and what type? Answers to these questions will help MAG better estimate the proportion of telecommuting in the region. As shown in Table H-12, 65% of households in the region own home computers. Computer ownership was highest in Gilbert, Chandler, Tempe and Peoria. It was lowest in East Central Phoenix.

Table H-12
Computer Ownership

Geographic Area	N	Yes	No
Apache Junction	100	69.3%	30.7%
Chandler	191	79.6%	20.4%
Gilbert	81	87.7%	12.3%
Glendale	268	65.2%	34.8%
Mesa	536	68.7%	31.3%
Peoria	113	78.6%	21.4%
North Phoenix	484	77.7%	22.3%
West Central Phoenix	396	47.5%	52.5%
East Central Phoenix	633	52.8%	47.2%
South Phoenix	200	54.3%	45.7%
Scottsdale/Fnt Hills/CvCrk	318	73.0%	27.0%
Sun City/Sun City West	152	64.5%	35.5%
Tempe/Guadalupe	263	80.6%	19.4%
Southwest	77	55.8%	44.2%
Northwest	32	59.4%	40.6%
Maricopa County	174	66.1%	33.9%
Total	4018	65.3%	34.7%

Base: All households, weighted.

Since computer ownership doesn't necessarily imply Internet access, a follow-up question was asked of all 2,650 households that reported owning home computers. Of those, 87% reported having Internet access. Those areas least likely to have Internet access were Apache Junction and West Central Phoenix.

Table H-13
Internet Access

Geographic Area	N	Yes	No
Apache Junction	69	76.8%	23.2%
Chandler	153	85.6%	14.4%
Gilbert	71	90.1%	9.9%
Glendale	174	89.7%	10.3%
Mesa	368	86.1%	13.9%
Peoria	88	89.8%	10.2%
North Phoenix	376	92.0%	8.0%
West Central Phoenix	188	78.7%	21.3%
East Central Phoenix	335	83.3%	16.7%
South Phoenix	108	88.0%	12.0%

Maricopa County	115	87.8%	12.2%
Total	2650	87.0%	13.0%

Base: All households reporting home computer ownership, weighted.

Those respondents with home computers and Internet service were asked how they access the Internet. Most (72%) access the Internet via a modem, while 18% use some type of high-speed access. A small proportion (2%) had Web TV. The respondents under "other" mostly referenced the Internet service provider rather than the access type (i.e., AOL or Netscape).

Table H-14
Type of Internet Access

Geographic Area	N	Modem	High Speed	Web TV	Other
Apache Junction	54	77.8%	7.4%	5.6%	9.3%
Chandler	130	63.8%	26.9%	1.5%	7.7%
Gilbert	64	78.1%	18.8%	-	3.1%
Glendale	156	73.1%	16.0%	1.9%	9.0%
Mesa	317	70.3%	20.2%	1.3%	8.2%

Total	2314	72.2%	18.3%	1.6%	7.9%

Base: All households with home computers and Internet access, weighted.

As with computers, cellular telephone ownership is also gaining in popularity. Maricopa County respondents were asked for the number of cellular telephones owned as part of this study. As shown in Table H-15, the mean number of cell phones owned was 0.89. Cellular telephone ownership was highest in Gilbert and lowest in East Central Phoenix and the Northwest portion of the county.

Table H-15
Cellular Telephone Ownership

Geographic Area	N	0	1	2	3+	Mean
Apache Junction	99	49.5%	35.4%	14.1%	1.0%	0.67

Total	3969	40.3%	35.5%	20.0%	4.3%	0.89

Base: All households reporting cellular telephone ownership, weighted.

b. Household Trip Indicators

The household file also contains summary variables that indicate the number and types of trips reported in the trip file. This includes number of places visited on diary day and number of trips. As shown in Table H-16 the number of trips can be summarized by purpose: home-based-work (HBW), home-based-shopping (HBS), home-based other (HBO), and non-home-based (NHB). Throughout this report, these designations will be used to define specific trips as follows:

Home-based work (HBW) designates trips that begin at home and end at work or vice versa.

Home-based shopping trips (HBS) begin at home and end at a shopping location or vice versa.

Home-based other trips (HBO) begin at home and end at a non-work/non-shopping location or vice versa.

Non-home based trips (NHB) are those that do not begin or end at home.

Appendix E contains six additional cross tabulations of household trip rates by various household characteristics.

Geographic areas such as Apache Junction and Sun City that have large numbers of retiree's have the smallest HBW trip rates and total trip rates. The geographic area with the highest trip rate is Gilbert, which has the largest average size of households.

Table H-16
Average Daily Household Trip Rates by Place of Trip Ends

Geographic Area	N	HBW	HBS	HBO	NHB	Total trips
Apache Junction	100	0.55	1.03	2.41	1.72	5.71
Chandler	191	1.68	0.76	3.83	2.37	8.64
Gilbert	81	1.92	1.14	5.82	2.69	11.57
Glendale	268	1.42	0.64	3.53	1.69	7.28
Mesa	536	1.36	0.61	3.67	1.76	7.41
Peoria	113	1.27	0.77	3.60	2.26	7.91
North Phoenix	484	1.48	0.79	3.32	2.33	7.91
West Central Phoenix	396	1.57	0.61	3.44	1.42	7.05
East Central Phoenix	633	1.19	0.64	2.72	1.45	6.00
South Phoenix	200	1.63	0.67	4.11	1.89	8.30
Scottsdale/Fnt Hills/CvCrk	318	1.07	0.73	3.71	2.13	7.64
Sun City/Sun City West	152	0.49	0.77	2.97	1.50	5.73
Tempe/Guadalupe	263	1.57	0.61	3.38	1.99	7.55
Southwest	77	1.31	0.56	3.09	1.25	6.20
Northwest	32	0.89	0.47	2.32	0.93	4.62
Maricopa County	174	1.08	0.70	3.49	2.08	7.36
Total	4018	1.33	0.69	3.42	1.82	7.26

Base: All households, weighted.

Table H-17 shows geographical areas that had high percentages of non-motorized trips seemed to be related to high percentages of people under 18 years of age (Gilbert, West Central Phoenix, and South Phoenix) or higher percentages of multi-family dwelling units (East Central Phoenix and Tempe).

Table H-17
Average Daily Household Trip Rates by Trip Type

Geographic Area	N	Non-Motorized	% Non-Motorized	Motorized	Total Trips
Apache Junction	100	0.48	8.4	5.22	5.71
Chandler	191	0.60	6.9	8.04	8.64
Gilbert	81	1.20	10.4	10.37	11.57
Glendale	268	0.59	8.1	6.69	7.28
Mesa	536	0.61	8.2	6.78	7.41
Peoria	113	0.60	7.6	7.31	7.91
North Phoenix	484	0.46	5.8	7.45	7.91
West Central Phoenix	396	0.77	10.9	6.27	7.05

Northwest	32	0.5	10.8	4.10	4.62
Maricopa County	174	0.49	6.7	6.87	7.36
Total	4018	0.64	8.8	6.62	7.26

Base: All households, weighted.

Table H-18 illustrates that trip rates are influenced by four household variables on trip rates. These variables are auto ownership, income, size, and workers. It is clear that each variable has a significant impact on trip rates.

Table H-18
Summary of Average Daily Household Trip Rates

Auto Ownership	HH Income	1 Person		2 Person			3+ Person			
		0 Wrkr	1 Wrkr	0 Wrkr	1 Wrkr	2+ Wrkr	0 Wrkr	1 Wrkr	2 Wrkr	3+ Wrkr
Auto 0	All Inc.	1.41	3.01	3.34	3.09	4.57*	6.59*	5.96	8.50	8.58*
Auto 1	< \$20k	2.58	3.44	3.08	5.17	6.79	7.92	8.70	9.90	8.76*
	\$20-<\$50k	2.73	3.67	5.67	5.74	7.24	6.87*	10.32	8.87	11.15
	\$50k+	3.64	4.30	6.30	7.33	6.15		11.04	12.72	12.00*

	\$20-<\$50k	4.14	3.84	6.27	5.72	6.81	11.36*	10.38	10.97	12.26
	\$50k+	3.95*	3.59	7.10	6.72	7.37	11.50*	14.03	13.21	12.83

Base: All households, weighted. *Indicates less than 10 observations. See Appendix E for related tables.

Table H-19 illustrates the trip rates for each geographic area by the number of household workers. Households with more workers tend to make more trips than households with fewer workers, however there is a significant amount of variance between geographic areas. Much of the variance in rates between areas can be attributed to household incomes and household sizes.

Table H-19
Average Daily Household Trip Rates by Workers

Geographic Area	N	0	1	2	3+	Total
Apache Junction	100	4.49	6.18	10.11	4.82*	5.71
Chandler	191	4.67	7.11	10.57	10.48	8.64

Northwest	32	3.66	5.28	8.50	6.00*	4.62
Maricopa County	174	3.94	7.41	10.45	15.09*	7.36
Total	4018	4.16	6.68	9.48	12.27	7.26

Base: All households, weighted. *Indicates less than 10 observations.

Table H-20 illustrates the trips rates of households by ethnicity. There is little variance in trips rates except for African American. Further study is necessary to determine why the trip rates for African American households are lower than the average.

Table H-20
Average Daily Household Trip Rates by Household Ethnicity

Geographic Area	N	White	Hispanic	African American	Asian American	Native American	Other	Total
Total	4018	7.33	7.47	5.67	7.25	7.51	5.79	7.26

Base: All households, weighted. *Indicates less than 10 observations.

Table H-21 illustrate the trip rates for each geographic area by the household income. Higher income households make tend to make more trips than lower income households however there is a significant amount of variance between geographic areas. Much of the variance in rates between areas can be attributed to number of workers and household sizes.

Table H-21
Average Household Trip Rates by Household Income

4.2 Person Survey Results

A total of 10,030 household members participated in the Maricopa Regional Household Travel Survey. The person data includes demographic information about the household members, student data, employment data for first and second jobs, and Internet usage both in general as well as during the travel period (if the household owned a home computer).

a. Person Demographics

The following tables show the distribution of household members by gender, age, licensed driver status, relationship to head of household, and, if disabled, whether that disability resulted in the need for a disabled parking permit. As shown in Table P-1, there was an almost equal distribution by gender in the survey respondent pool.

Table P-1
Gender of Household Members

Geographic Area	N	Male	Female	Refused
Apache Junction	188	42.8%	52.4%	4.8%
Chandler	503	49.3%	50.5%	.2%
Gilbert	263	49.4%	47.5%	3.0%

Maricopa County	409	44.4%	52.9%	2.7%
Total	10030	42.8%	52.4%	4.8%

Base: All household members, weighted.

The majority of respondents (56%) were between the ages of 19 and 64. An additional 23% of participating household members were under the age of 16, while 12% were between the ages of 65 and 84. The communities of Gilbert and South Phoenix are the “youngest” in terms of age distributions, while Sun City/Sun City West, Apache Junction, and the Northwest regions were the “oldest”.

Base: All household members, weighted.

To help understand the disability status of the household members, each respondent that reported having a disability was asked if they had either a disabled license plate or parking permit. Of the 666 respondents reporting a disability, almost half (45%) held either a disabled license plate or parking permit.

Table P-5
Special License Plate / Parking Permit

Disabled Plate/Permit	N	Percent

Base: All household members age 16+ (n=7,614), weighted.

b. Employment Data

All respondents age 16 or older were asked about employment. Those respondents that indicated they were not employed were asked about their non-work status. All employed respondents were asked how many jobs they worked. The general employment information is shown in the following tables. As shown in Table E-1, 60% of all respondents were employed either full-time or part-time, 19% were retired, 10% were unemployed, 7% homemakers, and 4% reported they were self-employed. Unemployment was highest for respondents in West Central Phoenix (14%), and the Southwest and Northwest regions of the county (13% each).

Total	7614	60.0%	3.5%	9.6%	19.0%	6.7%	1.1%

Base: All household members age 16+, weighted.

Those respondents who indicated they were employed were asked how many jobs they worked. As shown in Table E-2, 94% of employed respondents worked one only job. Those respondents working two jobs were mostly found in Sun City/Sun City West and Gilbert. On average, respondents reported working 15 hours per week at their second job.

c. Data on Primary Job

All respondents age 16 or older that were employed were asked a series of questions about their job. This included hours worked, work schedule, work start and end times, occupation, work location, tenure at that job, and parking costs. In addition, questions about employer benefits for parking and transit usage were asked. As shown in Table W-1, 55% of employed respondents worked between 40 and 50 hours per week. Eighteen percent of respondents worked 50 hours or more, while 20% worked less than 40 hours each week. Those respondents working the most hours were predominantly from Gilbert (27%), North Phoenix (26%), and Sun City/Sun City West (23%).

Of the 4,836 employed respondents, 258 reported that they worked from home (5%) during the recruitment interview. During the 48-hour travel period, 176 respondents (4%) actually recorded “work at home” activities. The distribution of work-at-home activities recorded during the travel period by day of week was:

- Weekend (Saturday/Sunday) – 7%
- Monday – 20%
- Tuesday – 25%
- Wednesday – 19%
- Thursday – 16%
- Friday – 13%

Of the 258 that reported they worked from home (during recruitment), only 73 actually reported work-at-home activities on their travel days – the remainder either didn’t work or worked at a non-home location. In addition, 103 respondents reported they did not work at home at all during recruitment but reported work-at-home activities on the travel day.

Most respondents (59%) work a fixed work schedule that doesn't vary based on the day of the week. However, 32% of the respondents reported that their work hours vary. Three percent each stated that either they had fixed start times but varying end times or fixed hours that varied based on the day of the week. Respondents from the Scottsdale/Fountain Hills/Cave Creek area were most likely to have varying work schedules.

The most frequent work start times were between the hours of 6 a.m. and 9 a.m., with 63% of all employed respondents starting work during that period. The start times were fairly consistent across the region, with the exception of the Northwest region of the county. Detailed (hourly) distributions of work start times are shown in Table W-5.

Base: All employed household members age 16+, weighted.

The distribution of respondents by occupational category is shown in Table W-7. Almost one-third (29%) of the respondents reported that they were employed in a professional specialty position. Executive, administrative or managerial positions were reported by 15% of the respondents, while 9% reported working in a position described as “handler, equipment cleaner, helper or laborer.”

Table W-7
Occupation

Occupation	N	Percent

d. Student Data

All respondents were asked for the highest level of education completed. As shown in Table S-1, 35% of respondents had not yet completed High School (which accounts for most respondents under the age of 19). Twenty-seven percent completed high school, 14% had completed 2 years of college or technical school, and 14% completed 4 years of college. Tempe/Guadalupe had the most educated population, while South Phoenix had the least.

Base: All household members, weighted.

For those respondents identified as students, data was obtained on how many days the student attended classes and what mode was used to get to class. Of the 2,658 students represented in the data set, most (80%) attend school 5 days a week. Eighteen percent of the students attend less than 5 days a week. Part-time students (i.e., attending less than 5 days per week) were most likely to be found in Apache Junction (40%).

Table S-3
Number of Days Attend School

Geographic Area	N	Less than 5	5 days	More than 5	Refused

e. Internet Usage Data

In addition to obtaining information about home computer ownership and Internet access, all respondents in sampled households that had home computers AND Internet access were asked about their Internet habits. This was followed by questions about Internet usage during the travel period for a select group of respondents. As shown in Table I-1, of the 5,860 respondents in households with home computers and Internet access, 79% reported using the Internet (the remaining 21% of the household members didn't use the Internet). Eleven percent of the respondents with home Internet access reported their work as the primary location they accessed the Internet.

Table I-1
Primary Internet Usage Location

Chat Rooms	7	0.1%	-	-	-	-
Other	346	4.2%	1.0%	0.2%	1.3%	0.1%
Refused	55	-	-	-	-	1.1%
Total	5071	81.4%	13.5%	2.3%	1.5%	1.2%

Base: All members of households with home computers and Internet access, weighted.

As a follow-up to these questions, selected respondents were asked about their Internet usage during their 48-hour travel period. These respondents included those age 18+ who reported their own travel information directly to an interviewer (as opposed to having someone else report their information). These respondents were asked for Internet usage for each travel day. On those travel days where the respondent indicated they did use the Internet, follow-up questions obtained the location at which the Internet was used and the purpose for using the Internet. As shown in Table I-3, 34% of the respondents reported using the Internet on the first travel day, while 35% reported using it on the second travel day.

Table I-3
Internet Usage on Travel Day

Used Internet	Day 1	Day 2
Yes	33.9%	35.1%
No	51.9%	51.5%
Don't remember	14.2%	13.4%

Base: All members age 18+ of households with home computers and Internet access that directly reported their travel data, weighted.

Those respondents who did use the Internet during their travel period were asked for the location at which they used the Internet. Unlike the question asked in the recruitment interview (displayed in Table I-1) that obtained primary usage location, respondents were asked for all locations at which they used the Internet. The locations were very consistent across both travel days and tracked the recruitment data displayed in Table I-1, with 69% reporting Internet usage in their homes and 29% reporting Internet usage at work.

Table I-4
Internet Usage Location on Travel Day

Internet Location	Day 1	Day 2
Home	68.6%	67.9%
Work	29.4%	29.6%
School	1.5%	1.7%
Other	0.5%	0.8%

Base: All members age 18+ of households with home computers and Internet access that directly reported their travel data, weighted.

The respondents primarily used the Internet on their travel days for communicating (31%), researching information on products or travel (30%), or general surfing (15%). This varied greatly from the purposes stated in recruitment, at which time the respondents reported using the Internet predominantly for shopping. At work, respondents reported using the Internet to research products (11%), communicating (8%), and general surfing (4%).

Table I-5
Internet Usage Purpose on Travel Day

Internet Usage Purpose	N	Home	Work	School	Other	Total
Shopping	140	3.0%	0.9%	-	-	4.0%
Banking	164	3.5%	1.1%	-	-	4.6%

Refused	34	0.7%	0.3%	-	-	1.0%
Total	3549	69.4%	28.1%	1.7%	0.8%	100%

Base: All members age 18+ of households with home computers and Internet access that directly reported their travel data, weighted.

f. Person Trip Indicators

Table P-7 indicates that males make slightly fewer trips per day than females. The difference is very small, only 0.06 trip per day (2%).

Table P-7
Average Person Trip Rates by Gender

Gender	N	Average Trip Rate	Trip Rate Day 1	Trip Rate Day 2
Male	4720	2.92	2.96	2.88
Female	5310	2.98	3.05	2.90
Total	10030	2.94	2.99	2.88

Base: All household members, weighted.

Table P-8 illustrates trip rates by respondent age. It is interesting to note that people in the “65 to 85 age” group make almost as many trips as the “19 to 64 age” group (0.46 trips per day less, 14%).

Table P-8
Average Person Trip Rates by Respondent Age

Respondent Age	N	Average Trip Rate	Trip Rate Day 1	Trip Rate Day 2
Less than 16	2331	2.36	2.39	2.33
16 to 18	344	3.04	3.04	3.03
19 to 64	5614	3.25	3.33	3.16

85 or more	139	1.97	1.96	1.97
Refused	405	2.68	2.67	2.68
Total	10030	2.94	2.99	2.88

Base: All household members, weighted.

4.3 Vehicle Availability Results

The 4,018 Maricopa County households reported having a total of 6,589 household vehicles available. The vehicle data collected for those vehicles is shown in the following tables, and includes: vehicle year, vehicle make, vehicle model (not shown), body type and ownership status.

The fleet distribution in Maricopa County included 23% built prior to 1990, 23% built from 1990 to 1994, 37% built between 1995 and 1999, and 15% built after 1999. The older (pre-1980) vehicles were most likely to be found in East Central Phoenix (8%). The newer vehicles (2000 or later) were more likely to be found in Gilbert (20%).

**Table V-1
Distribution of Vehicle Age**

4.4 Travel Behavior Results

As part of the Maricopa Regional Household Travel Survey, the 4,018 participating households reported data for 78,511 places visited and 58,484 trips. The travel behavior data includes the general type of place visited, land use type of that location, activities at each place, travel modes, and arrival/departure times. For auto trips, data includes number traveling in the party and how many were household members, whether a household vehicle was used, and if travel was made on any portion of a highway. For trips made by transit, access and egress modes were recorded, as well as arrival and departure times at the bus stop. The travel data is summarized in the following tables.

As shown in Table T-1, half of all reported places visited were at the home residence, while 10% were to work locations and 5% were to school locations. Seven percent of places visited were shopping locations, while one-fourth (25%) were non-home, non-work, non-school, and non-shopping locations.

Table T-1
Place of Activities by Geography

Geographic Area	N	Home	School	Work	Shopping	Other	Out of Area
Apache Junction	1521	50.9%	2.6%	6.0%	13.9%	26.6%	.1%
Chandler	4304	50.1%	4.7%	10.8%	6.9%	26.9%	.6%

Maricopa County	3376	50.1%	4.5%	8.9%	7.9%	27.8%	.8%
Total	78511	52.3%	4.8%	9.9%	6.9%	25.4%	.7%

Base: All places visited, weighted.

The places visited varied based on the day of week that travel was recorded. Shopping trips were higher on Saturdays and Sundays, while school and work trips were higher on weekdays.

Table T-2
Place of Activity by Day of Week

Day of Week	N	Home	School	Work	Shopping	Other	Out of Area
Sunday	3936	54.9%	.9%	2.9%	10.5%	29.9%	.9%
Monday	13656	51.9%	5.1%	10.8%	7.0%	24.6%	.6%
Tuesday	16478	52.3%	5.1%	11.0%	6.1%	24.9%	.6%
Wednesday	14638	52.6%	5.2%	10.9%	6.0%	24.8%	.5%
Thursday	14380	52.9%	5.6%	10.6%	5.7%	24.6%	.7%
Friday	11769	50.6%	5.0%	9.4%	7.4%	26.7%	1.0%
Saturday	3653	52.2%	1.5%	4.1%	12.7%	28.3%	1.3%
Total	78511	52.2%	4.8%	9.9%	6.9%	25.4%	.7%

Base: All places visited, weighted.

Twelve percent of activities reported were for family/personal business and an additional 12% were for work purposes. North Phoenix and Tempe/Guadalupe respondents reported the highest proportion of work trips (14% each), while South Phoenix and Southwest region respondents reported the highest proportion of school trips (6%). Peoria respondents reported family/personal business at 18% of locations visited, while Apache Junction respondents reported eating at 6% and shopping at 14% of their locations. Note that while Tables T-1 and T-3 share similarly named categories (work, school, shopping), the data vary. This is because the activities as shown in Table T-3 can take place at multiple locations (e.g., respondents can work at home, at their work location, or attend a work-related meeting at a third location – of which only the work at work location is reflected under “work” in Table T-1).

Table T-3
Major Activities Reported by Geography

Total	78511	12.2%	5.0%	12.4%	3.4%	6.9%	60.1%

Base: All places visited, weighted.

A total of 176 respondents reported working at home during their 48-hour travel period (4%). The respondents were distributed throughout the study area.

The major activities reported by day of week parallel the place of activities reported in Table T-2. As shown below, work and school activities were mainly reported on weekdays, while shopping activities were higher on the weekends. Note that as with Tables T-1 and T-3, the categories in Tables T-2 and T-4 are similarly named, but Table T-2 refers to an actual designated location while Table T-4 refers to the activity (which can take place at multiple locations).

Table T-4
Major Activities Reported by Day of Week

Day of Week	N	Work	School	Family/ Personal	Eat	Shopping	Other
Sunday	3936	3.6%	.9%	9.4%	4.6%	10.5%	71.0%
Monday	13656	13.7%	5.4%	12.4%	2.9%	7.0%	58.6%
Tuesday	16478	13.8%	5.4%	12.3%	2.9%	6.1%	59.5%
Wednesday	14638	13.3%	5.4%	12.8%	3.0%	6.0%	59.6%
Thursday	14380	12.9%	5.9%	12.4%	3.2%	5.7%	59.9%
Friday	11769	11.4%	4.9%	13.6%	4.4%	7.4%	58.2%
Saturday	3653	4.9%	1.6%	10.5%	5.2%	12.7%	65.1%
Total	78511	12.2%	5.0%	12.4%	3.4%	6.9%	60.1%

Base: All places visited, weighted.

Tables T-5 (a, b, c) through T-8 (a, b, c) illustrate the travel between geographic areas, by trip type. The “a” version of each table provides the percentage of origin trips between each geographic area. For example the first row of table T-5a shows the percentage of work trips that come from Apache Junction and go to the other areas (5.1% of the work trips that originate in Apache Junction are destined for Chandler).

The “b” version of each table provides the percentage of destination trips between each geographic area to each geographical area. For example the first row of table T-5b shows the percentage of work trips that arrive in Apache Junction from other areas (0.7% of the work trips that end in Apache Junction come from Chandler).

Finally, the “c” version of each table provides the percentage of total trips between each geographic area. For example the first row of table T-5c shows the percentage of regional work trips that go between Apache Junction and other areas (0.1% of the regional work trips are between Apache Junction and East Phoenix).

Other	1.0%	0.9%	0.6%	1.0%
All other at home activities	36.4%	35.5%	39.3%	36.5%
Total	103.0%	103.4%	102.2%	102.9%

Base: All trip-related activities (n=60165– multiple response allowed). (Excludes all activities reported at Place 1).
Columns total greater than 100% as multiple responses allowed.

Eighty-seven percent of all trips were made by auto (63% driver, 24% passenger). Walk trips accounted for 7% of the mode share, while transit (local bus) was one percent (Table T-11).

Table T-11
Distribution of Travel Modes

Travel Mode	Frequency	Percent	Duration (minutes)
Auto – driver	36683	62.8%	21.02
Auto – passenger	14195	24.3%	19.15
Walk	4302	7.4%	13.32
School bus	1806	3.1%	25.15
Bicycle	645	1.1%	19.56
Local Bus	449	0.8%	42.28
Taxi	90	0.2%	38.67
Express Bus	56	0.1%	48.05
Vanpool	47	0.1%	39.53
Shuttle/Limo	38	0.1%	25.56
Dial-a-ride	22	0.0%	23.95
Motorcycle/moped	3	0.0%	35.63
Other	116	0.2%	97.91
Total	58484	100.0%	20.48

Base: All reported travel modes, weighted.

The majority of transit trips were made by households in West Central Phoenix, while walk trips were predominantly in the Southwest Region (Table T-12).

Base: All non-home-based trips, weighted.

The average reported trip duration was 20 minutes. As shown in Table T-17, 70% of all trips were 20 minutes or shorter. Trips by Transit tended to be the longest, while those by walk and bike were the shortest. Tables T-18 through T-22 show the reported trip durations by mode for the standard trip purposes.

Average		18.02	17.75	18.20	29.34	10.92	18.70	40.13

Base: All non-home-based trips, weighted.

All respondents who reported making a trip (regardless of mode used) were asked how many traveled in their party. Most weekday shared trips were for school or eating. On the weekend, almost all trips were shared trips. The following tables show the distribution of auto occupancy for all auto-driver trips as well as average auto occupancy by day of week and trip purpose.

Table T-23
Auto Occupancy by Trip Purpose

Occupancy	Home-based Work	Home-based Shopping	Home-based Other	Non-Home Based	Total
1	93.0%	70.4%	66.8%	69.4%	72.5%
2	5.2%	22.4%	22.7%	21.3%	19.2%
3	1.1%	4.5%	6.7%	6.2%	5.4%
4	0.6%	2.7%	3.8%	3.1%	2.9%
Total	100.0%	100.0%	100.0%	100.0%	100.0%

Base: All auto-driver trips, weighted (n=27,610).

Table T-24
Average Auto Occupancy by Day of Week and Trip Purpose

Trip Purpose	Weekday	Saturday	Sunday
Work	1.08	1.12	1.13
School	1.26	1.12	1.00
Family/personal	1.68	1.85	1.65
Eat	1.63	2.09	2.08
Shopping	1.43	1.68	1.72
Other	1.36	1.73	1.88

Base: All auto-driver trips, weighted (n=27,610).

In terms of auto trips, most respondents (92%) reported using a household vehicle to make the trip. Auto trips in non-household vehicles, were most often made by households in East Central Phoenix, Chandler, and Sun City/Sun City West.

Table T-25
Household Vehicle Used

Geographic Area	N	Yes	No
Apache Junction	1013	92.0%	8.0%
Chandler	2960	90.9%	9.1%
Gilbert	1636	95.7%	4.3%

Northwest	251	92.8%	7.2%
Maricopa County	2301	90.9%	8.1%
Total	50884	92.2%	7.8%

Base: All auto trips, weighted.

All respondents that made an auto trip and who were interviewed in person were asked whether any portion of that trip was made on a freeway. Of the 23,899 auto trips that fell into this category, 20% were made on some portion of a freeway. The majority of freeway trips were made during the week (Monday through Friday), and the most frequent users live in Peoria and North Phoenix.

Sun City/Sun City West	872	11.5%	88.5%	15.3%	84.7%	41.5%	58.5%
Tempe/Guadalupe	1802	20.9%	79.1%	10.0%	90.0%	26.2%	73.8%
Southwest	410	20.5%	79.5%	2.5%	97.5%	14.8%	85.2%
Northwest	146	18.7%	81.3%	-	100.0%	-	100.0%
Maricopa County	896	22.1%	77.9%	16.7%	83.3%	29.9%	70.1%
Total	23892	19.3%	80.7%	16.8%	83.2%	20.0%	80.0%

Base: All auto trips reported in person, weighted.

All respondents who reported using transit were asked for access and egress modes. As shown in Table T-22, most transit trips began with walking (89%).

Table T-27
Access Mode of Transit Riders

Access Mode	N	Percent
Walked	447	88.7%
Dropped off	25	5.0%
Drove/parked	9	1.8%
Bike	5	1.1%
Other	17	3.4%
Total	504	100.0%

Base: All transit trips, weighted.

As with the access mode, the majority of transit riders walked from the transit stop to their ultimate destination (76%).

Table T-28
Egress Mode of Transit Riders

Access Mode	N	Percent
Walked	381	75.6%
Drove parked car	19	3.8%
Picked up	2	0.3%
Bike	5	1.0%
Transferred to new bus	84	16.7%
Other	13	2.6%
Total	504	100.0%

Base: All transit trips, weighted.

4.5. Survey Data Expanded

The expansion factors created in the previous section were applied to the survey data. The results, shown in the following tables, reflect the total number of weekday, Saturday and Sunday trips captured through the survey and expanded using the factors developed and documented in Section 3.2 of this report.

The 4,018 Maricopa County households reported 58,331 trips. When expanded, these 58,331 trips become 13,942,000 regional trips. This includes 2,207,000 work trips, 946,000 school trips, and 2,140,000 family/personal trips. The following tables show expanded trips by weekday vs. travel on Saturday and travel on Sunday. The proportion of weekday vs. Saturday vs. Sunday trips is based on the distribution of travel days assigned to households for recording travel, as shown in Table 2-9.

Table X-1
Expanded Trips by Trip Purpose in Thousands – Weekday Travel

Geographic Area	Work	School	Family/ Personal	Eat	Shopping	Other	Total
Apache Junction	26	9	39	22	47	124	267
Chandler	120	50	113	28	49	299	658
Gilbert	53	24	63	15	30	176	361

Base: All Sunday trips, expanded.

5. EVALUATION OF SURVEY RESULTS

As previously stated, the Maricopa Regional Household Travel Survey was conducted to help understand the travel behavior of the Phoenix region and to provide input information for future travel demand model development. A review of the resultant database through preparation of this report suggests that:

- The percentage of geocoded trip ends was very high;
- The collected data includes the variables and geographic breadth to allow analysts to compare and combine it with 2000 Census data as that becomes available,
- The analysis of survey data and the comparison results with national estimates of trip-making behavior indicate that the survey results appear to be very reasonable. These analyses are described below, along with the associated tables.

Tables 5-1, 5-2, and 5-3 show trip rates derived from weighted survey data. The relative magnitudes of the rates appear to be quite reasonable and consistent with other high quality data sets.

Table 5-1
Household Survey Daily Trip Rates by Trip Purpose (All Modes) – Weekday Travel

Household Classification	Households in Survey	Home-Based Work Trip Rate	Home-Based Shopping Trip Rate	Home-Based Other Trip Rate	Non-home Based Trip Rate	Total
Total	4018	1.41	0.65	3.43	1.89	7.38
1-person	1102	0.64	0.38	1.12	1.05	3.19
2-person	1426	1.32	0.71	2.41	1.87	6.31
3-person	536	1.90	0.76	4.10	2.62	9.38

1-vehicle	186	0.37	0.99	1.93	1.40	4.69
2-vehicles	169	0.61	1.43	4.09	2.48	8.60
3+ vehicles	28	1.65	1.67	3.62	1.71	8.66
0-worker	93	0.00	0.78	1.52	0.73	3.05
1-worker	166	0.46	1.00	2.94	1.76	6.14
2+-workers	148	1.02	1.70	3.66	2.54	8.92

Base: All Saturday household travel, weighted.

Table 5-3
Household Survey Daily Trip Rates by Trip Purpose (All Modes) – Sunday Travel

Household Classification	Sunday Households in Survey	Home-Based Work Trip Rate	Home-Based Shopping Trip Rate	Home-Based Other Trip Rate	Non-home Based Trip Rate	Total
Total	426	0.40	1.07	3.86	1.38	6.71
1-person	113	0.20	0.41	1.49	0.73	2.84
2-person	143	0.30	0.94	3.08	1.23	5.56
3-person	73	0.33	1.67	4.27	1.64	7.91
4+-person	97	0.81	1.58	7.47	2.18	12.05
0-vehicle	20	0.13	0.89	2.04	0.47	3.52
1-vehicle	155	0.35	0.70	2.72	0.93	4.70
2-vehicles	170	0.38	1.19	4.53	1.82	7.92
3+ vehicles	80	0.58	1.59	5.10	1.57	8.84
0-worker	95	0.00	0.46	2.70	0.86	4.04
1-worker	162	0.35	1.01	3.48	1.37	6.21
2+-workers	168	0.65	1.48	4.88	1.69	8.70

Base: All Sunday household travel, weighted.

Table 5-4 compares the household survey results to rates provided in NCHRP Report #365, a source of national “rules-of-thumb” for modeling analyses. Caution should be exercised in comparing the 1989 trip rates to those from the 2001 survey, as the surveys employed different methodologies. The HBW and total trip rates are slightly lower than the “norm” and will undergo a detailed review as the modeling update gets underway.

Table 5-4
Comparison of Household Survey Trip Rates to NCHRP 365

	Home-Based Work Trip Rate	Home-Based Other Trip Rate	Non-home Based Trip Rate	Total Trip Rate
Maricopa - 2001				
Daily Rate	1.41	4.08	1.89	7.38
Percent of Trips	19%	55%	26%	100%
Maricopa - 1989				
Daily Rate	1.85	3.96	2.33	8.14
Percent of Trips	23%	49%	28%	100%
NCHRP 365				
Daily Rate	1.80	4.80	2.00	8.50
Percent of Trips	21%	56%	23%	100%

Base: All households, weighted.

As Table 5-5 shows, the Maricopa trip rates are slightly lower than the NCHRP rates, with the biggest difference occurring for smaller households and zero vehicle households.

Table 5-5
Comparison of Household Survey Trip Rates to NCHRP Trip Rates

Classification	Households in Survey	Survey Total Trip Rate	NCHRP Total Trip Rate
One person households	1102	3.19	4.2
Two person households	1426	6.31	7.3
Three person households	536	9.38	9.3
Four person households	954	12.72	12.0
Zero vehicle households	257	3.23	4.1
One vehicle households	1619	5.39	6.3
Two vehicle households	1606	7.92	9.7
Three + vehicle households	536	8.80	11.8
Total	4018	7.38	8.5

Base: All households, weighted.

The tables and figures on the following pages show travel by time of day and mode based on trip purpose (home-based work, home-based shopping, home-based other, and non-home based trips). The times reflected in the tables and figures are departure times for each trip.

Figure 5-1
Home-Based Work Trips by Mode and Departure Time

Figure 5-2
Home-Based Shopping Trips by Mode and Departure Time

Figure 5-3
Home-Based Other Trips by Mode and Departure Time

Figure 5-4
Non-Home-Based Trips by Mode and Departure Time

CONCLUSION

The data set produced as a result of the Maricopa Regional Household Travel Survey represents an excellent source of regional travel behavior information for the transportation planning community. The project scope of work, along with careful survey design and execution, have provided a high quality data set for use in regional transportation planning and future modeling and travel forecasting efforts. As indicated by the tables and summaries presented throughout this report, the Maricopa Regional Household Travel Survey data set will serve as a solid foundation for regional model update efforts.

APPENDIX A: RECRUITMENT QUESTIONNAIRE

Maricopa Regional Household Activity Survey Recruitment Questionnaire (Demographic Information)

NOTE: Text in CAPS is not read by interviewer; text in upper and lower case is read by interviewer.

Introduction

Hi, I'm _____ and I'm calling on behalf of the Maricopa Area of Governments, or MAG. MAG works closely with<CITY> to plan for transportation in your area. May I speak with <FNAME><LNAME>

IF NAME UNKNOWN:

May I speak with a head of the household or someone 18 years of age or older?

The Maricopa Association of Governments is conducting a study to understand why and how people travel in Maricopa County, as part of planning for future transportation needs. The study is purely a research effort and any information you provide will be held in strict confidence. The information you provide will be combined with that of 4,000 other households from throughout the county to make decisions about how to improve the transportation system.

To be certain that everyone in the county is properly represented, I'll be asking some questions about your household. This includes information about your vehicles, where family members work or travel for school, and household income. These are all important for understanding how and where people travel, and how it varies by day of week or time of day.

The survey has three parts. Part one is a telephone interview that I'd like to start now. In part two, people in your household will record their travel for two days in a log. For part three, we'll call back to collect the log information from each person. If you have no questions, I'll start Part One now.

H1. First, how many vehicles are presently available to members of your household? This includes all cars, vans, trucks, SUVs, RVs, motorcycles and mopeds in working order, whether owned or leased or provided by an employer.

Vehicle Information – questions repeated for each vehicle in the household

Now I need to get some information about each vehicle in your household. Starting with<VEHNO >, what is the vehicle year, make and model?

V1. ENTER VEHICLE YEAR

V2. What is the make of that vehicle?

ACURA	01	LINCOLN	22
AUDI	02	MAZDA	23
BMW	03	MERCURY	24
BUICK	04	MERCEDES.....	25
CADILLAC	05	MITSUBISHI.....	26
CHEVROLET	06	NISSAN.....	27
CHRYSLER	07	OLDSMOBILE	28
DAEWOO.....	41	PLYMOUTH	29

RF 9

H9. [IF HAVE HOME COMPUTER] Do you have access to the Internet from home?

YES 1
NO 2
DK 8
RF 9

H10. [IF HAVE INTERNET ACCESS] What type of Internet access do you have at home?

NONE 0
Dial up/Modem with tones 1
High speed connection 2
Web TV 3
OTHER, SPECIFY 7
DK/RF 9

Person Information

Now I need to get some information about each person in your household, so I can prepare individual diaries. Again, I want to assure you that this information is for research purposes only and will be kept strictly confidential. Earlier, you indicated that there were <HHSIZ> persons in your household. Okay. Now I'll begin with you...

What is your first name?

What is the first name of the other person living in your home?

What is the first name of the next person in your home, from oldest to youngest?

P1. What is <FNAME >'s relationship to you? DON'T ASK FOR RESPONDENT

SELF 1
Spouse/partner 2
Son/Daughter 3
Mother/Father/Mother In-law/Father In-law 4
Other relative 5
Live-in Help 6
Not Related 7
DK/RF 9

P2. What is <FNAME >'s gender? DON'T ASK FOR RESPONDENT

MALE 1
FEMALE 2
DK/RF 9

P3. How old is <FNAME>?

P4. [IF AGE>15] Do <YOU> have a valid driver's license?

Yes 1
No 2
DK 8
RF 9

P5. Do/Does <YOU > have any type of physical disability?

Yes 1
No 2
DK/RF 9

P6. [IF HAS A DISABILITY] What type of disability is that?

NONE 0
Difficulty standing, walking or climbing stairs 1
Visually impaired/blind 2
Hearing impaired/deaf 3
Wheelchair 4
Require cane/walker 5
OTHER, SPECIFY 7
DK/RF 9

P7. [IF HAS A DISABILITY] Do/Does<YOU>have a disabled license plate or parking permit?

YES 1
NO..... 2
DK/RF 9

P8. How would<YOU >describe<YOUR >race or ethnic background?

WHITE/NOT HISPANIC 1
HISPANIC 2
AFRICAN AMERICAN 3
ASIAN/PACIFIC ISLANDER 4
AMERICAN INDIAN/NATIVE AMERICAN 5
OTHER, SPECIFY 7
DK/RF 9

P9. [AGE>15] Which of the following best describes<YOUR>current situation?

Employed full or part time 1
Self-employed 2
Regular volunteer worker. 3

Remaining Household Questions

H11. What was the total household income in 2000 from all sources before taxes, for all members of your household?

Was it above or below \$35,000?

Below \$35,000 1
\$35,000 or above 2
DK 8
RF 9

H12. I will read you a series of income ranges. Please stop me when I read the range that is closest to your household's.

Less than \$10,000 1
\$10,000 to \$19,999 2
\$20,000 to \$34,999 3
\$35,000 to \$49,999 4
\$50,000 to \$69,999 5
\$70,000 or more 6
DK 8
RF 9

H13. [IF INCOME <\$20,000] Does your household receive income from any of the following sources:

Welfare 1
Social Security 2
Disability 3
Veteran's benefits 4
Other governmental sources 5
NONE 6
OTHER, SPECIFY 7
DK/RF 9

H14. How many telephone lines do you have? This does not include cell phones.

H15. How many of those telephone lines are only used for a fax or modem?

H16. Have there been times within the past 12 months when the home you were living in did not have telephone service for reasons other than brief service or equipment problems?

YES 1
NO 2
DK 8
RF 9

H17. [IF YES TO H16] How long were you without phone service? Was it . . .

Less than 2 weeks 1
2 weeks to less than 1 month 2
1 month to less than 3 months 3
3 months to less than 6 months 4
6 months or more 5
DK 8
RF 9

H18. How many cellular phones does your household have?

Thank you for completing Part One of the survey. In Part Two, people in your household are asked to record their travel for two days in a log that we'll mail to you. The log package will contain instructions and more information about the survey. Are there any questions about the log that I can answer now? Okay. Your household should keep track of their travel on READ DATE. Is this okay?

H19. To collect your travel log information after your travel day, we will need to call you back. When we do this, should we call you at this telephone number, or is there a different phone number where you would prefer to be called?

This number 1
Different number 2

H20. [IF DIFFERENT NUMBER] And what is the number?

H21. At what time would you like us to call you to retrieve your travel information?

8am to 11:59am 1
12-noon to 3:59pm 2
4pm to 7:59pm 3
8pm to 11:59pm 4

H22. To mail your package, I need to obtain/verify your home address. Is it: <HADDR > <HSUIT > <HCITY >
<HZIP1>

H23. Does<RESPN >have an email address that is checked daily? IF YES: What is it?

YES, RECORD RESPONSE1
NO, DO NOT HAVE EMAIL ADDRESS THAT'S CHECKED DAILY2
DK/RF9

H24. And I'd like to confirm that I reached you at<PHONE >. Is this correct?

YES 1
NO 2

H25. [IF NO] What phone number did I reach you at? FORMAT: ###-###-####

Thank you for helping us. We'll call you on the day before your travel day to make sure you received your travel logs and to answer any questions you might have. Have a nice evening/day. Goodbye.

APPENDIX B: RETRIEVAL QUESTIONNAIRE

**Maricopa Regional Household Activity Survey
Retrieval Questionnaire
(Travel Information)**

NOTE: Text in CAPS is not read by interviewer; text in upper and lower case is read by interviewer.

Introduction

Hi - my name is _____ and I'm calling on behalf of the Maricopa Association of Governments about the survey your household recently completed. May I please speak with<FIRSTNAME ><LASTNAME >?

Verify Previous Data

I'm calling to collect your travel information. First I need to verify that the information we show for your household is correct. I'd like to start by verifying the address where you live. Is it <ADDRESS>?

- A. Our records show that there are <HHSIZE> people living in your household. Is this correct?
- B. Okay- now I need to confirm the name, age and gender we have for each household member.
VERIFY NAME, AGE, GENDER, IF EMPLOYED AND IF STUDENT FOR EACH HH MEMBER.
- C. CHECK THAT YOU HAVE AN ADDRESS/CROSS STREETS LOCATION FOR ALL HABITUAL (WORK AND SCHOOL) ADDRESSES
- D. FOR EACH STUDENT IN HOUSEHOLD, ASK IF THEY WENT TO SCHOOL ON THE TRAVEL DAY. RECORD YES OR NO. IF THEY DID NOT, RECORD THE REASON WHY
- E. FOR EACH EMPLOYEE/WORKER IN HOUSEHOLD, ASK IF THEY WENT TO WORK ON THE TRAVEL DAY. RECORD YES OR NO. IF THEY DID NOT, RECORD THE REASON WHY
- F. In terms of vehicles available to your household, we show that you have <HHVEH> available. Is that right?

Identify Informant – Respondent / Other HH Member

- A. Great, now I'd like to collect the trip information your household recorded for<TRAVEL DAYS > We'll begin with your information. Do you have your diary handy?
 - 1 YES, HAS DIARIES OR WILL GET THEM
 - 2 NO, DOESN'T HAVE DIARIES. NEED TO RECONSTRUCT THE TRAVEL DAYS WITH THE RESPONDENT.
 - 3 REFUSED, DOESN'T WANT TO PARTICIPATE
- B. IF OTHER HH MEMBER: ENTER THE NUMBER OF THE PERSON WHOSE TRAVEL/ ACTIVITY INFO YOU ARE GETTING NOW.
- C. WAS THIS PERSON INTERVIEWED?
YES.....1
NO, PROXY2
- D. [IF PROXY] WHICH PERSON SERVED AS PROXY? ENTER PERSON NUMBER FROM SAMPLE SHEET
- E. Did<YOU/HE/SHE >use<YOUR/HIS/HER >diary to record<THEIR >travel?
YES.....1
NO2
DK/RF9
- F. How many total places did<YOU/HE/SHE>visit over the course of the first travel day? VERIFY AGAINST TRIP SUMMARY AT END OF INTERVIEW.

G. How many total places did <YOU/HE/SHE> visit over the course of the second travel day? VERIFY

Place / Activity Information for Place 1 (Day 1 and Day 2)

1. What time did you wake up on your <first/second> travel day? ENTER IN MILITARY TIME

2. Where were you at 3 a.m. on your <first/second> travel day?

1=HOME

2=SCHOOL

3=WORK

4=OTHER PLACE – Previously entered or someone else's habitual address

5=NEW PLACE

6=OUT OF AREA (Specify city and state)

IF NEW PLACE:

A. Does the place have a name?

B. Can you tell me which city that is in?

C. CONFIRM ARIZONA

D. What is the street address (RECORD FULL STREET ADDRESS)?

E. Can you tell me the names of two cross streets nearest to that location?

F. Is there a landmark nearby? (THIS CAN BE A CONVENIENCE STORE, STATUE, PUBLIC BLDG)

G. Do you know the zip code for that location?

3. What type of place is it?

1=Office building

2=Retail

3=Industrial

4=Medical

5=Educational (12th grade or less)

6=Educational (higher than 12th grade)

7=Government

8=Residential

9=Open / Public place (bus stop, park, church, other recreational sites)

97=Other (specify)

98=DON'T KNOW

99=REFUSED

4. What was your main activity there?

WORKING AT HOME (RELATED TO MAIN OR SECOND JOB)..... 01

SHOPPING AT HOME..... 02

OTHER AT HOME ACTIVITIES..... 03

CHANGE MODE OF TRANSPORTATION..... 04

PICK UP SOMEONE OR GET PICKED UP 05

DROP OFF SOMEONE OR GET DROPPED OFF..... 06

ATM, BUY GAS, QUICK STOP FOR COFFEE, NEWSPAPER, ETC. 07

SHOPPING..... 08

801 E. William Cannon, Suite 115
Austin, Texas 78745

RESPONDENT PACKET LETTER

«TODAY»

«FIRSTNAME» «LASTNAME»

«ADDRESS»

«CITY», «STATE» «ZIP»

Dear «LASTNAME» Family:

Thank you for agreeing to participate in the **Maricopa Regional Household Travel Survey**. You and your family are helping to improve regional transportation by providing information about your daily travel.

Good information on how, why, and where people make their daily trips helps make better use of increasingly scarce resources and develop strategies for making wise transit and highway investments. Your participation is important for reaching these goals.

The survey is being conducted by NuStats on behalf of the Maricopa Association of Governments (MAG). NuStats ensures that **all information collected is strictly confidential and will be used for research purposes only**. The information from your household will be used only in combination with data from 4,000 other participating households throughout the valley.

For more information about this important survey and a list of frequently asked questions, please visit the survey web site at www.nustats.com.

A survey specialist will call to collect your information after your assigned two-day travel period. Please keep your diaries until he/she calls you.

We appreciate your time and help with this very important project. If you have any questions or comments, please call Ratna Korepella (602-254-6300) at the Maricopa Association of Governments or myself (888-687-8287, extension 4055, sbricka@nustats.com) at NuStats.

Sincerely,

Stacey Bricka

Research Director, NuStats

	1	Walk	
	2	Bicycle	
	3	Driver	
	4	Passenger	
	5	Local or community bus service	
	6	Express bus service	
	7	Vanpool service/ Valley Metro Vanpool	
	8	Dial-A-Ride/Paratransit	
	9	School Bus	
	10	Motorcycle/Moped	
	11	Taxi	
	12	Shuttle/Limo	
	97	Other(specify)	
	99	DK/RF	
OTHMODE		Other Mode	41
PARTY		Members in Travel party	49
	Value	Label	
	99	DK/RF	
HH_MEM		Number of household members on trip	50
PER_TRP		Person on trip	51
NONHH		Number of non-HH Members traveling	58
	Value	Label	
	99	DK/RF	
HHVEH		Household vehicle used	59
	Value	Label	
	1	Yes	
	2	No	
	8	DK	
	9	RF	

VEHNO	Vehicle Used	60
	Value Label	
	97 Non-household vehicle	
	99 DK/RF	
HIGHWAY	Highway Use	61
	Value Label	
	1 Yes	
	2 No	
	8 DK	
	9 RF	
BOARD	Boarding Station	62
BSARR	Time arrived at bus stop	70
	Value Label	
	9999 DK/RF	
ACMOD	Access mode	71
	Value Label	
	1 Walk	
	2 Drove and parked	
	3 Was dropped off	
	4 Rode bike	
	7 Other	
	9 DK/RF	
ACMOO	Access mode other	72
EXIT	Exit Station	80
BSDEP	Time got off bus	88
	Value Label	
	9999 DK/RF	
EGMOD	Egress mode other	89
	Value Label	
	1 Walk	
	2 Picked up car and drove	
	3 Was picked up	
	4 Rode bike	
	5 Caught new bus at this stop	
	7 Other	
	9 DK/RF	
EGMOO	Other Egress Mode	90
ROUTE	Bus Route	98
FARE	Fare paid	106
	Value Label	
	.00 Free	
	999999.00 DK/RF	
FPMT	Fare payment method	107
	Value Label	
	1 Cash	
	2 Credit card	
	3 Pass	
	4 Transfer	
	7 Other	
	9 DK/RF	
FPMT0	Other fare payment method	108
TRPDUR	Trip Duration	116
ACTDUR	Activity Duration	117

APPENDIX E: SUPPLEMENTAL DATA TABLES

The following tables provide additional cross-tabulations of household trip rates that may be useful in modeling. They involve the four variables used to construct Table H-18.

Supplemental Table 1
Household Vehicles by Size

Household Vehicles	Household Size		
	1	2	3+
0	1.82	3.50	6.76
1	3.32	5.74	9.64
2+	3.58	6.66	12.08

Base: All households, weighted.

Supplemental Table 2
Household Vehicles by Workers

Household Vehicles	Household Workers			
	0	1	2	3+
0	2.02	4.12	6.87	7.72*
1	3.74	5.63	8.39	11.19
2+	6.45	8.32	9.73	12.51

Base: All households, weighted. *Indicates less than 10 observations.

Supplemental Table 3
Household Vehicles by Income

Household Vehicles	Household Income		
	< \$20k	\$20k-<\$50k	\$50k+
0	3.04	3.51	5.57*
1	4.94	5.52	5.74
2+	7.07	8.51	10.18

Base: All households, weighted. *Indicates less than 10 observations.

Supplemental Table 4
Household Size by Workers

Household Size	Household Workers			
	0	1	2	3+
1	2.49	3.74	-	-
2	5.72	5.75	7.00	-
3+	8.92	10.57	11.72	12.33

Base: All households, weighted.

Supplemental Table 5
Household Size by Income

Household Size	Household Income		
	< \$20k	\$20k-<\$50k	\$50k+
1	2.48	3.36	4.01
2	4.42	6.17	7.07
3+	8.79	10.49	13.17

Base: All households, weighted.

Supplemental Table 6
Household Size by Income

Household Workers	Household Income		
	< \$20k	\$20k-<\$50k	\$50k+
0	2.94	4.55	5.87
1	5.78	6.23	8.15
2	8.60	8.82	10.09
3+	9.69	12.25	12.72

Base: All households, weighted.

APPENDIX F: STATISTICS TABLE

Table 1
Binomial Percentage Distribution at 95% confidence interval

Sample Size	Binomial Percentage Distribution				
	50/50	60/40	70/30	80/20	90/10
100	10	9.8	9.2	8	6
200	7.1	6.9	6.5	5.7	4.2
300	5.8	5.7	5.3	4.6	3.5
400	5	4.9	4.6	4	3
500	4.5	4.4	4.1	3.6	2.7
600	4.1	4	3.7	3.3	2.4
700	3.8	3.7	3.5	3	2.3
800	3.5	3.5	3.2	2.8	2.1
900	3.3	3.3	3.1	2.7	2
1000	3.2	3.1	2.9	2.5	1.9
1100	3	3	2.8	2.4	1.8
1200	2.9	2.8	2.6	2.3	1.7
1300	2.8	2.7	2.5	2.2	1.7
1400	2.7	2.6	2.4	2.1	1.6
1500	2.6	2.5	2.4	2.1	1.5
1600	2.5	2.4	2.3	2	1.5
1700	2.4	2.4	2.2	1.9	1.5
1800	2.4	2.3	2.2	1.9	1.4
1900	2.3	2.2	2.1	1.8	1.4
2000	2.2	2.2	2	1.8	1.3
